Technical Data Sheet

Astroflame Graphite HPE Sealant®

UIC of product-type: AFHPE

TECHNICAL DATA SHEET

**ASTRO HPE
SEALANT®**ETA 14-0096
CE-1121-CPR-JA5024

Unique identification code of product-type: AFHPE

Technical Description of the Product

Astro HPE Sealant is an acrylic based graphite sealant used to reinstate the fire resistance performance of wall constructions where they have been provided with for the penetration of single or multiple services.

Astro HPE Sealant is gun applied to annular space around the service(s) to the required depth

Astro HPE Sealant is supplied in 310ml cartridges, 600ml foils, 2.5, 5, 10, 20kg pails, 250kg drums

Internal use - ETAG 026-3 (used as European Assessment Document EAD) Type Z₁

Specification of the Intended use in accordance with the relevant EAD

Intended Use

The intended use of Astro HPE Sealant is to reinstate the fire resistance performance of rigid and flexible wall constructions where they are penetrated by various cables, plastic and insulated metallic pipes

The specific elements of construction that the system Astro HPE Sealant may be used to provide a penetration seal in, are as follows:

Rigid walls

The wall must have a minimum thickness of 100mm and comprise concrete, aerated concrete or masonry, with a minimum density of 650kg/m³

Rigid walls

The wall must have a minimum thickness of 120mm and comprise concrete, aerated concrete or masonry, with a minimum density of 650kg/m³

Flexible walls

The wall must have a minimum thickness of 100mm and comprise timber or steel studs lined on both faces with minimum 2 layers of 12.5mm thick, 'Type F' Gypsum boards according to EN 520. In timber stud walls, no part of the penetration shall be closer than 100mm to a stud, the cavity must be closed between the penetration seal and the stud and minimum 1mm of insulation of class A1 or A2 according to EN 13501-1, is provided within the cavity between the penetration seal and the stud.

Flexible walls

The walls must have a minimum thickness of 120mm and comprise timber or steel studs lined on both faces with minimum 2 layers of 15mm thick, 'Type F' Gypsum boards according to EN 520. In timber stud walls, no part of the penetration shall be closer than 100mm to a stud, the cavity must be closed between the penetration seal and the stud and minimum 100mm of insulation of class A1 or A2 according to EN 13501-1, is provided within the cavity between the penetration seal and the stud.

Astro Batt - See Sec 1

Astro PS Coating - See Sec 2

The supporting construction must be classified in accordance with EN 13501-2 for the required fire resistance period

SEC 1

Astro Batt is a coated mineral wool board used to reinstate the fire resistance performance of wall constructions where they have been provided with apertures for the penetration of single or multiple services.

Astro Batt is supplied coated on both faces. The board is then cut and friction fit into the aperture, prior to being inserted into the aperture in the wall.

Astro Batts are 50mm thick and supplied in overall dimensions 1200mm x 600mm with a density of 140kg/m³ is subject to a separate ETA referenced ETA 14-0099

TECHNICAL DATA SHEET

**ASTRO HPE
SEALANT®**ETA 14-0096
CE-1121-CPR-JA5024

Unique identification code of product-type: AFHPE

SEC 2

Astro PS Coating is an ablative coating applied to mineral wool board used to reinstate the fire resistance performance of wall constructions where they have been provided with apertures for the penetration of single or multiple services.

The mineral wool board is the cut and friction fit into the aperture, prior to being inserted into the aperture on wall. The Astro PS Coating is then applied over the surface of the board material to provide a dry film thickness of 0.7mm. Astro PS Coating is subject to a separate ETA referenced 14-0097

The Astro HPE Sealant may be used to provide a penetration seal with plastic and insulated metallic pipes, and cables (for details see Annex C)

The total amount of cross sections of services (including insulation) should not exceed 60% of the penetration area.

The system Astro HPE Sealant may be used to seal apertures in the separating element up to 100mm wide by 300mm high. The minimum permitted separation between adjacent seals/apertures is 200mm.

Pipes must be installed singular, cables require no minimum separation

Services in walls shall be supported at maximum 270mm from the face of the separating element

The provisions made in this European Technical Assessment are based on an assumed working life of the Astro HPE Sealant of 10 years, provided that the conditions laid down in the product data sheet for the packaging/ transport/ storage/ installation/ use/ repair are met. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works

Use Category

Type Z1: Intended for use in internal conditions with humidity equal to or higher than 85% RH excluding temperatures below 0°C, without exposure to rain or UV

The seals may only be penetrated by the services described in ETAss 14-0096; other parts or support constructions must not penetrate the seals

The service support construction must be fixed to the building element containing the penetration seal or a suitable adjacent building element, in such manner that in the case of fire, no additional load is imposed on the seal. Furthermore it is assumed that the unexposed face support is maintained for the required period of fire resistance

Pipe must be perpendicular to the seal surface

It is assumed that compressed air system are switched off by other means in the case of fire

The function of the pipe seal in case of pneumatic dispatch systems, pressurised air systems etc. is guaranteed only when the systems are shut off in case of fire

The assessment does not cover the avoidance of destruction of the seal or off the abutting building element(s) by forces caused by temperature changes in case of fire. This has to be considered when designing the piping system

The approval does not address any risks associated with leakage of dangerous liquids or gases caused by failure of the pipe(s) in case of fire

The durability assessment does not take account of the possible effect of substances permeating through the pipe on the penetration seal

Air permeability

System Astro HPE Sealant has been tested in accordance with BS EN 1314-1 to provide the following results

Product tested			Astro Intu Mastic	
	Results under positive chamber pressure		Results under negative chamber pressure	
Pressure (Pa)	Leakage (m³/h)	Leakage (m³/M²/h)	Leakage (m³/h)	Leakage (m³/m²/h)
50	0.2	5.6	0.3	8.3
100	0.4	11.1	0.6	16.7
150	0.7	19.4	0.9	25.0
200	1.0	27.8	1.2	33.3
250	1.1	30.6	1.6	44.4
300	1.2	33.3	1.9	52.8
450	2.2	61.7	2.7	75.0
600	2.4	66.7	3.4	94.4

Dangerous Substances

The applicant is required to submit a written declaration stating whether or not the fire stopping and fire sealing product contains dangerous substances according to European and national regulations, when and where relevant in the Member States of destination, and shall list these substances

Astroflame Fireseals Limited declare that Product Astro HPE is in compliance with Council Directive 76/769/EEC of 27th July on the approximation of the laws, regulations and administrative provisions of the Member States relating to restrictions on the marketing and use of certain dangerous substances and preparations (incl. all amendments and adaptations)

Confirmation has further been declared that all dangerous chemical substances $\geq 1.0\%$ w/w as well as all toxic, carcinogenic, toxic for reproduction and mutagenic chemical substances $\geq 0.1\%$ w/w (Status: 29. adaption - 2004/73/EG - of the EU directive 67/548/EEC - classification, packaging and labelling of dangerous substances) are stated in the Astro HPE material safety data sheets (according to 91/155/EEC including amendments) and have been considered for the classification of the products to the directive 1999/45/EG (classification of preparations, including amendments).amendments).

All dangerous chemical substances are below the classification limits of 67/548/EEC

Durability and Serviceability

Astro HPE Sealant has been tested in accordance with EOTA Technical Report - TR024 - Edition November 2006, for the type Z₁ use category specified in ETAG 026-3 (used as European Assessment Document, EAD), and the results of the tests have demonstrated suitability for penetration seals intended for use in internal conditions with humidity equal to or higher than 85% RH excluding temperatures below 0°C, without exposure to rain or UV

Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with references to its legal

According to the decision 1999/454/EC of the European Commission the system of assessment and verification of constancy of performance (see Annex V to the Regulation (EU) No 305/2011) given in the following table apply:

Products	Intended uses	Level or Class	System
Fire stopping and fire sealing products	For fire compartmentation and / or fire protection or fire performance	Any	System 1

Resistance to fire Classification of Astro HPE Sealant

Flexible and Rigid wall constructions according to 1.2.1 with wall thickness of minimum 120mm

Penetration seal with Astro HPE Sealant - Plastic Pipes

Penetration Specification	Astro HPE (installed both faces)	Backing Material	Classification
PVC Pipe 40mm $\varnothing$ 1.9 - 3mm wall thickness	10mm annulus x 25mm deep	N/A	EI120 U/C
PVC Pipe 125mm $\varnothing$ 4.8 - 7.4mm wall thickness	16mm annulus x 25mm deep	30mm deep, 80kg/m ³	EI120 U/C
HDPE Pipe 63mm $\varnothing$ 7.2mm wall thickness, Cables up to 21mm $\varnothing$	300mm wide x 100mm high x 25mm deep	N/A	EI120 U/C
HDPE Pipe 90mm $\varnothing$ 9.2mm wall thickness	12.5mm annulus x 25mm deep	N/A	EI120 U/C
ABS Pipe 90mm $\varnothing$ 6mm wall thickness	12.5mm annulus x 25mm deep	N/A	EI120 U/C

ASTROFLAME has provided this specification on the basis of data, information & site conditions given to ASTROFLAME by the client, the respective ASTROFLAME product information & the existing level of technical knowledge. This specification relates to the expected performance of the proposed detail, were it to be subjected to the standardised test against which the judgement was made. The accuracy of this specification can only be guaranteed provided:

- 1. Only original ASTROFLAME products as defined within this specification are used
- 2. These specific products are used & installed only by a competent, experienced installer & by strictly obeying the conditions & calculations mentioned in this specification, as well as all relevant technical instructions, operating manuals, setting manuals, installation manuals & all other ASTROFLAME data sheets.
- 3. The proposed performance, listed prerequisites & criteria conform with actual existing site conditions & have been checked & agreed by the installer & client.

TECHNICAL DATA SHEET

**ASTRO HPE
SEALANT®**
**ETA 14-0096
CE-1121-CPR-JA5024**

Unique identification code of product-type: AFHPE

Durability and Serviceability

Requirement - The principle of the durability test is to select suitable physico-chemical or technological properties of the product and to check ETAG No 026: whether these properties have changed during exposure of the product to defined exposure conditions. The product shall be Part 2: Clause tested according to the following procedures:

2.4.12

Property	Test method
Appearance	EOTA ETAG No 026: Part 2: Clause B.12
Hardness After Curing	EOTA ETAG No 026: Part 2: Clause B.5.3
Expansion Pressure	EOTA TR 024: 2009, clause 3.1.12
Expansion Ratio	EOTA TR 024: 2009, clause 3.1.11

Expansion Ratio

Exposure	Individual values	Mean
Blank Samples	24.52, 26.23, 25.58	A = 25.44
Type Z ₁	23.86, 26.77, 22.44	A = 24.36

Expansion Pressure

Exposure	Individual values (N/mm ²)	Mean
Blank Samples	0.624, 0.610, 0.618	A = 0.618
Type Z ₁	0.640, 0.590, 0.590	A = 0.606

Conclusions

The data discussed above satisfies the general aspects relating to fitness for use: Durability and serviceability: 12 of EOTA ETAG No 026: Part 2, for Type Z₁ environmental conditions: Products for penetration seals intended for uses at internal conditions with high humidity, excluding temperatures below 0°C

Identification of the product

Requirement - The Intertek MSG report No. MECH/W002016RL001 details the following tests, as detailed in ETAG No 026: Part 2, utilised to ETAG No 026: identify Astroflame Astro HPE:

Part 2: Clause

2.4.12

Product characteristic	Verification Method
TGA	EOTA ETAG No 026: Part 3: Clause B.2
Viscosity of Liquid Materials	EOTA ETAG No 026: Part 3: Clause B.7
Density of Liquid Materials	EOTA ETAG No 026: Part 3: Clause B.6.1
Hardness After Curing	EOTA ETAG No 026: Part 2: Clause B.5.3

TECHNICAL DATA SHEET

**ASTRO HPE
SEALANT®**ETA 14-0096
CE-1121-CPR-JA5024

Unique identification code of product-type: AFHPE

The drywall construction was of overall dimensions 3000mm wide by 3000mm high by 100mm thick. The framing comprised 50mm wide galvanised mild steel studs, at maximum 600mm centres, friction fitted into galvanised steel head and base channels. Each side of the stud frame was faced with two layers of 12.5mm thick 'Gypsum' Type F plasterboard. The framework was infilled with 50mm thick mineral wool insulation having a nominal density of 100kg/m³. The wall was provided with eight circular apertures, which was penetrated by a range of shower units.

Specimen	Aperture	Seal type	Service
13	2no. 75mm diameter apertures	The aperture was sealed with a nominally 10mm wide by 25mm depth of Astroflame Fireseals Limited "Astro HPE Sealant (high pressure exerting)" Sealant, applied flush with the unexposed face of the wall	Uponor water valve with tap unit fitted to project from the unexposed face of the partition
14	2no. 75mm diameter apertures	The aperture was sealed with a nominally 10mm wide by 25mm depth of Astroflame Fireseals Limited "Astro HPE Sealant (high pressure exerting)" Sealant, applied flush with the exposed face of the wall	Uponor water valve with tap unit fitted to project from the unexposed face of the partition
15	2no. 75mm diameter apertures	The aperture was sealed with a nominally 10mm wide by 25mm depth of Astroflame Fireseals Limited "Astro HPE Sealant (high pressure exerting)" Sealant, applied flush with the unexposed face of the wall	Uponor water valve with tap unit fitted to project from the unexposed face of the partition
16	2no. 75mm diameter apertures	The aperture was sealed with a nominally 10mm wide by 25mm depth of Astroflame Fireseals Limited "Astro HPE Sealant (high pressure exerting)" Sealant, applied flush with the exposed face of the wall	Uponor water valve with tap unit fitted to project from the unexposed face of the partition

Specimen	Integrity (minutes)			insulation (minutes)
	Cotton pad	Sustained flames	Gap gauge

TECHNICAL DATA SHEET

**ASTRO HPE
SEALANT®**

TECHNICAL SCHEDULE

No. CF5127

Unique identification code of product-type: AFHPE

**Astro HPE Sealant**

This approval relates to the use of Astro HPE intumescent sealant pipe closure system for fire protection where there are services penetrating walls. The detailed scope is given in the Approval Matrix included in this Certificate. This shows the acceptable configurations to provide fire resistance periods in accordance with BS EN 1366-3: 2009 of up to 120 minutes for differing services and elements of construction

This certification is designed to demonstrate compliance of the product or system specifically with Approved Document B (England and Wales), Section 2 of the Technical Standards (Scotland), Technical Booklet E (N. Ireland). If compliance is required to other regulatory or guidance document there may be additional considerations or conflict to be taken into account.'

The product is approved on the basis of:

- I. Initial type testing
- II. Audit testing at the frequency specified TS03
- III. A design appraisal against TS03
- IV. Inspection and surveillance of factory production control
- V. Production surveillance under ISO 9001: 2008

The masonry or concrete walls may be and drywalls shall be at least 100mm thick and have at least the same fire rating as that required for the penetration seal

The services which may be fitted through the seals are PVC, HDPE, ABS, insulated copper pipes and cables as detailed within the Approval Matrix included in this Certificate

The approval relates to on-going production. Product and/or its immediate packaging is identified with the manufacturer's name, the product name or number, the CERTIFIRE name or name and mark, together with the CERTIFIRE certifire number and application where appropriate

Copper - 13 ø 0.8 - 7mm wall thickness, with 13mm Armaflex insulation	12mm annulus x 25mm deep		120 minutes		120 minutes	
Walls		The walls shall be a minimum of 100mm thick. Drywalls shall comprise a minimum of 2 layers of ‘Type F’ Gypsum board on both faces, with minimum 50mm studs. Masonry / Concrete walls shall have a minimum density for concrete or brick of 780kg/m³ and for aerated concrete blocks of 600kg/m³. All walls shall have at least the same fire rating as that required for the pipe closure system.				
Application Technique		The hole for the pipe shall be drilled to suit the required annular space. The pipe shall then be positioned centrally within the hole and then the remaining annular space shall be in-filled to full depth (of the drywall skin) min 25mm, with the Astro HPE intumescent sealant material				
Service Coat-Back		Not required			U Value	Not known
Service support Requirements		Services should be rigidly supported via steel angles, hangars or channels, not further than 150mm and 450mm from the surface of the sealing system on both faces				
Resistance to Smoke		Not evaluated by this approval		Weather Capability		Not evaluated by this approval
Acoustic Rating		Not evaluated by this approval		Movement Capability		Not evaluated by this approval

ASTROFLAME has provided this specification on the basis of data, information & site conditions given to ASTROFLAME by the client, the respective ASTROFLAME product information & the existing level of technical knowledge. This specification relates to the expected performance of the proposed detail, were it to be subjected to the standardised test against which the judgement was made. The accuracy of this specification can only be guaranteed provided:

1. Only original ASTROFLAME products as defined within this specification are used
2. These specific products are used & installed only by a competent, experienced installer & by strictly obeying the conditions & calculations mentioned in this specification, as well as all relevant technical instructions, operating manuals, setting manuals, installation manuals & all other ASTROFLAME data sheets.
3. The proposed performance, listed prerequisites & criteria conform with actual existing site conditions & have been checked & agreed by the installer & client.

Technical specification document

No: Chilt/P12083/10

Performance testing to the principles of BS EN 1026: 2000 Windows and doors - Air permeability - Test method was conducted on your panel on 13 September 2012. The technical specification is detailed below. The specimen was delivered to Chiltern Dynamics laboratory on 10 September 2012

Description of construction

The specimen was identified as Pyrocoustic HPE sealant. The overall panel dimensions were 30mm wide x 1200mm high x 50mm deep and mounted within a softwood subframe for installation into the test rig.

	Material / type	Dimensions (mm)	Density (kg/m ³)

This document confirms that performance testing was conducted on 13 September 2012. Testing was conducted the principles of the following standard:-

- BS EN 1026: 2000 Windows and doors - Air permeability - Test method.

The following results were achieved

Product tested			Astro HPE Sealant	
Pressure (Pa)	Results under positive chamber pressure		Results under negative chamber pressure	
	Leakage (m ³ /h)	Leakage (m ³ /m ² /h)	Leakage (m ³ /h)	Leakage (m ³ /m ² /h)
50	0.2	5.6	0.3	8.3
100	0.4	11.1	0.6	16.7
150	0.7	19.4	0.9	25.0
200	1.0	27.8	1.2	33.3
250	1.1	30.6	1.6	44.4
300	1.2	33.3	1.9	52.8
450	2.2	61.1	2.7	75.0
600	2.4	66.7	3.4	94.4

The results relate only to the specimen tested, as detailed in the technical specification Chilt/P12083/tec10/AR1
